PROFESSIONAL SUMMARY

- Results-driven DevOps, Site Reliability & Kubernetes Platform Engineer with 12+ years of progressive experience in cloud infrastructure, observability, and automation. Deep expertise in managing enterprise Kubernetes platforms (OpenShift, EKS, AKS) including cluster lifecycle management, implementing and managing monitoring solutions using Dynatrace, Splunk, ELK Stack, and Prometheus/Grafana with proven success in designing SLAs, SLOs, and SLIs for enterprise applications and infrastructure.
- Extensive hands-on experience in Kubernetes cluster administration, CI/CD and DevSecOps automation, GitOps-based deployments using Harness and ArgoCD, and Python/Bash scripting across AWS and Azure environments. Expert-level Terraform practitioner with deep serverless and event-driven architecture experience using AWS Lambda, Kafka, and RabbitMQ.
- Strong track record in incident management, root cause analysis, performance tuning, and establishing observability frameworks using Dynatrace that drive high availability and operational excellence. Excellent communicator skilled in collaborating with and leading cross-functional DevOps, Cloud, Security, and Engineering teams to optimize platform performance and reliability.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS (EC2, ECS, EKS, Lambda, S3, RDS, CloudWatch, ALB/ELB), Azure (App Services, Azure Spring Cloud, Service Bus, APIM, Virtual Networks, AAD, RBAC)
- **DevOps & CI/CD:** Harness, Jenkins, GitLab CI/CD, GitHub Actions, Azure DevOps Pipelines, ArgoCD, Maven, Gradle, UrbanCode, DevSecOps; leveraged AI-powered pipeline intelligence for automated deployment verification and intelligent rollback strategies
- **Containers & Orchestration:** Kubernetes (OpenShift, EKS, AKS), ECS, Docker, Helm, Istio Service Mesh, Kong API Gateway, Cluster Lifecycle Management (Install/Upgrade/Scale), Horizontal Pod Autoscaling, Cluster Autoscaler, Network Policies, Ingress Controllers, Pod Security Standards, OPA/Gatekeeper
- **Infrastructure as Code:** Terraform (expert), Ansible, CloudFormation, ARM Templates, Chef, Puppet, Vagrant
- **Messaging & Event Streaming:** Kafka, RabbitMQ, Solace, Azure Service Bus, AWS SQS/SNS
- **Serverless:** AWS Lambda, Azure Functions, event-driven architectures
- **Monitoring & Observability:** Dynatrace (APM, distributed tracing, RUM), Splunk, Prometheus, Grafana, ELK Stack, Application Insights, Log Analytics, New Relic, CloudWatch, Nagios
- **Scripting & Automation:** Python, Bash, Shell, PowerShell
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle, SQL Server, Azure SQL Database, Redis
- **Operating Systems:** Linux (RHEL, CentOS, Ubuntu, Debian, Solaris), Windows Server
- **App/Web Servers:** Apache Tomcat, Nginx, JBoss, Oracle WebLogic, WebSphere, Apache
- **Networking & Protocols:** TCP/IP, HTTP/HTTPS, DNS, DHCP, LDAP, SNMP, FTP, SSL/TLS
- **Tools & Collaboration:** Git, Bitbucket, SVN, TFS, JIRA, Remedy, Autosys, VMware, Rundeck

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate

PROFESSIONAL EXPERIENCE

Senior DevOps & Site Reliability Engineer | SAP Labs, Montreal, Canada August 2019 – Present

- Engineered comprehensive observability solutions using Dynatrace, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Application Insights, and Log Analytics with custom KQL queries, building real-time monitoring dashboards and automated alerting rules that reduced Mean Time To Detection (MTTD) by 50%
- Defined and maintained Service Level Objectives (SLOs), Service Level Indicators (SLIs), and SLA compliance metrics for enterprise cloud platforms, implementing SRE best practices with 24/7 on-call rotation for incident management and root cause analysis (RCA)
- Provided L3-level production support for enterprise platforms on Azure and AWS, performing advanced troubleshooting across App Services, Azure Spring Cloud microservices, Service Bus messaging, Kubernetes clusters, and virtual network connectivity, reducing incident resolution time by 45%
- Architected and maintained enterprise CI/CD and DevSecOps pipelines using Harness, Jenkins, GitLab CI/CD, and Azure DevOps; harnessed AI-driven pipeline intelligence within Harness to implement automated deployment verification gates,

canary analysis, and GitOps workflows with ArgoCD for continuous delivery from commit to production, reducing deployment cycles by 60% and eliminating manual approval bottlenecks

- Led and mentored a cross-functional team of 6 DevOps and SRE engineers, conducting sprint planning, code reviews, and technical roadmap sessions while remaining hands-on with infrastructure design, pipeline development, and incident response
- Managed high-availability cloud infrastructure on AWS and Azure using Terraform, CloudFormation, and ARM Templates, provisioning 200+ resources with Infrastructure as Code ensuring 99.9% uptime
- Developed and deployed AWS Lambda serverless functions integrated with event-driven architectures using Kafka and RabbitMQ for asynchronous microservice communication, reducing infrastructure overhead and improving system scalability
- Administered enterprise Kubernetes platforms across OpenShift and Amazon EKS, performing full cluster lifecycle management including installation, version upgrades, node scaling, and maintenance windows; configured ingress controllers, network policies, and Istio service mesh and Kong API Gateway for secure inter-service traffic management, improving resource utilization by 40%
- Implemented pod autoscaling strategies using Horizontal Pod Autoscaler (HPA) and Cluster Autoscaler, enforced pod security standards, OPA/Gatekeeper admission policies, and resource quotas across multi-tenant Kubernetes clusters to optimize workload efficiency and cluster security posture
- Developed Python and Bash automation frameworks for infrastructure provisioning, Azure resource management, configuration management, backup workflows, log rotation, health checks, and self-healing capabilities, eliminating 30+ hours of manual operational toil weekly
- Implemented Azure AD (Entra ID) authentication and RBAC policies across multiple Kubernetes namespaces and Azure subscriptions, configuring Managed Identities for secure service-to-service communication and Key Vault integration for secrets management
- Configured and maintained web application servers including Apache Tomcat, Nginx, and JBoss, optimizing performance tuning, load balancing with ELB/ALB, and SSL/TLS certificate management
- Led cloud migration projects from on-premises to AWS/Azure, conducting infrastructure assessment, designing migration strategy, and executing phased migrations ensuring zero-downtime cutovers and 25% cost optimization
- Demonstrated expertise in version management using Git and artifact management using Artifactory/Nexus, implementing GitFlow branching strategies and automated validation hooks

Platform Support & DevOps Engineer | SAP Hybris, Montreal, Canada May 2018 – July 2019

- Built production-grade CI/CD pipelines using Harness and Jenkins declarative syntax with Maven/Gradle builds; utilized Harness continuous verification and ML-based deployment analysis to automatically detect regressions post-deployment, integrated automated testing frameworks, and multi-environment deployments, reducing release cycles from 2 weeks to 3 days
- Integrated Dynatrace APM for end-to-end distributed tracing, real user monitoring (RUM), and centralized log aggregation, enabling rapid troubleshooting and reducing Mean Time To Resolution (MTTR) by 40%
- Delivered L2/L3 application support for production e-commerce platforms, performed advanced log analysis using Splunk and Azure Log Analytics, configured intelligent monitoring alerts, and implemented automated health checks to minimize system downtime
- Managed Docker containers and Kubernetes (AKS) and ECS clusters including cluster upgrades and maintenance, configured Helm charts for application packaging, implemented Istio service mesh for traffic management, and deployed ingress controllers for external connectivity
- Implemented event-driven microservice communication using Kafka topics and RabbitMQ message queues, enabling reliable asynchronous processing and decoupled service architecture
- Automated deployment workflows using Python scripts, Bash, and Ansible playbooks for application rollouts, configuration management, database schema migrations, and rollback procedures, achieving 98% deployment success rate
- Maintained version control using Git with GitFlow branching strategy, conducted peer code reviews, managed build artifacts in Nexus repository, and implemented Git hooks for automated validation

Platform Implementation Engineer | SAP Hybris, Montreal, Canada July 2017 – April 2018

- Collaborated with enterprise clients to implement SAP Hybris e-commerce platform on cloud infrastructure, customizing data models, configuring business workflows, and integrating with external systems via REST APIs and web services
- Implemented observability stack using Splunk for log aggregation, Dynatrace and Grafana for metrics visualization, and Nagios for infrastructure monitoring with custom Python-based plugins for proactive issue detection
- Configured and hardened Linux servers (RHEL 7/8, Ubuntu, CentOS) applying kernel patches, SELinux/AppArmor policies, and firewall rules (iptables/firewalld) for PCI-DSS compliance

- Utilized Ansible for configuration management and infrastructure automation, creating reusable Python-enhanced playbooks for server provisioning, application deployment, and configuration drift remediation, reducing manual setup time by 70%
- Deployed scalable infrastructure on AWS and Azure using Terraform, implementing high availability architectures with AWS Lambda for serverless automation and disaster recovery solutions
- Worked in Agile/Scrum environment using JIRA for sprint planning, backlog grooming, defect tracking, and continuous improvement initiatives

DevOps & Application Support Analyst | CIBC, Toronto, ON July 2016 – June 2017

- Managed end-to-end CI/CD pipelines using Jenkins, UrbanCode Deploy, and Kubernetes for container orchestration, reducing deployment time by 55% for critical banking applications
- Led cloud migration initiative from on-premises to Microsoft Azure, migrating legacy .NET and Java applications to Azure App Services, Azure SQL Database, and Virtual Machines with minimal downtime
- Deployed and managed Docker containers in OpenShift (Red Hat Kubernetes) and ECS environments, performed cluster lifecycle operations including node provisioning and rolling upgrades, configured persistent volumes (PV/PVC), implemented blue-green deployments, and automated rollback strategies
- Designed automation solutions using Python, Shell scripting, and PowerShell for system administration, log parsing, backup automation, and infrastructure provisioning, reducing operational overhead by 30%
- Automated batch job scheduling using Autosys workload automation, created complex job dependencies, configured SLA monitoring, and reduced job failures by 25%
- Provided 24/7 L3-level on-call support for critical banking applications, performed incident triage and troubleshooting using APM tools, implemented monitoring and alerting solutions, and coordinated with cross-functional teams for rapid issue resolution
- Participated in root cause analysis (RCA) for major incidents, identifying improvement areas and implementing corrective actions to prevent recurrence

DevOps Engineer | Money Mart, Victoria, BC October 2014 – June 2016

- Assisted in strategic cloud migration from on-premises to AWS, migrating physical servers to EC2, databases to RDS (MySQL/PostgreSQL), and file storage to S3, achieving 30% cost reduction
- Implemented enterprise monitoring and observability using Nagios for infrastructure monitoring, Splunk and Dynatrace for centralized log management and application performance monitoring, and configured intelligent alerts for proactive issue detection
- Configured and maintained Linux servers (Red Hat, Ubuntu, CentOS), performing system administration including user/group management, package management (yum/apt), and performance tuning using Python scripts
- Participated in incident response team providing L2/L3 support, performed root cause analysis using log analysis and system metrics, documented findings, and implemented corrective actions
- Contributed to CI/CD process improvement by evaluating tools like Jenkins and Git, implementing version control best practices, and documenting standard operating procedures (SOPs) for deployment workflows
- Worked with Docker and Kubernetes for containerized application deployment, and utilized JIRA for issue tracking and cross-team collaboration

EDUCATION

Master of Science in Computer Engineering

Fairleigh Dickinson University, Vancouver, BC
